

COMPOSTING TIPS FOR HOME-GARDENING PEEPS!

1

When adding grass clippings to a compost pile for nitrogen, ensure to mix with carbon-rich materials.

2

Avoid composting fats, pet waste, or animal products as they may draw pests to the pile and potentially spread disease.

3

Keep your compost in a black bin in direct sunlight when composting during the winter season and use hay bales for insulation.

4

Compost piles can be created by layering thin alternating greens and browns, or by mixing everything together thoroughly. Both methods are effective!

35%–55%

A typical starting compost mix will have an ideal solids percentage.
